EcoVadis	Last rating awarded 2025	Last rating awarded 2024
Platinum	10	5
Gold	8	4
Silver	6	3
Bronze	4	2
nichts	0	0

EcoVadis evaluates a company's sustainability performance in the areas of environment, labor and human rights, ethics, and sustainable procurement. The result is presented as a scorecard and divided into four rating levels: Bronze (top 3 %), Silver (top 15 %), Gold (top 5 %), and Platinum (top 1 %) of all evaluated companies. If no new rating is awarded for 2025, only half the points are credited.

ISO 14001	Rating
Certification	10
No certification	0
ISO 14001 is the international standard for environmental management. It helps companies systematically improve their environmental performance and reduce ecological risks.	

amfori BSCI / Sedex	Rating
2 memberships	13
1 membership	10
None	0
amfori BSCI and Sedex are international social standards ensuring fair working conditions in global supply chains. Companies commit to labor rights, health and safety, and fair wages. As the standards are similar and sometimes audited together, a second membership earns only 3 additional points.	

**FSC®**

	Rating
Certification	10
License	5
None	0

The FSC® guarantees responsible forest management and identifies products whose wood comes from ecologically and socially sound sources.

FSC certification proves that a company produces sustainably and that all materials come from responsible forestry.

It is an official proof of genuine sustainability in production and supply chains.

The FSC license only allows the use of the FSC logo on products or packaging, but does not automatically indicate that the products themselves were sustainably produced.

Simply put: certification guarantees sustainability; the license only denotes labeling.

**UN Global Compact**

	Rating
Member	10
Non-member	0

The UN Global Compact is a voluntary initiative of the United Nations, committing companies to human rights, labor standards, environmental and climate protection, and anti-corruption measures.

A public statement is also required in which companies disclose their efforts and commitments.

**CO<sub>2</sub> Accounting**

	Rating
CO <sub>2</sub> emissions offset at no additional cost	10
CO <sub>2</sub> emissions offset at additional cost	5
Not offered	0

CO<sub>2</sub> accounting provides the basis to measure emissions and set targets. If emissions are additionally offset, this helps achieve climate goals.

**Sustainability Report**

	Rating
Publicly available (annual publication)	10
Not publicly available / no information provided	0

A well-prepared, regularly published sustainability report helps define concrete goals and measures, and highlights the areas where the greatest sustainability impact can be achieved.

**Sustainable Product Range**

	Rating
Transparent and verifiable, fact-based	7
Based on labels only, without considering other criteria such as CO <sub>2</sub> impact	5
Products without labels, not verifiable	3

Full shop transparency allows customers to clearly identify sustainable offerings and make informed choices – because not everything that looks sustainable is actually sustainable.
